PROFESSIONAL SUMMARY

Analyst who turns raw, complex data into revenue-driving decisions — most recently uncovering a 1,052% revenue opportunity inside a \$7.6B automotive portfolio and improving reporting accuracy by 80% for Bright Television in a single 72-hour sprint. Specialist in SQL, Snowflake, Google BigQuery, and Power BI, with a full-stack engineering edge: capable of building the systems that generate the data, not just analysing it. Delivered a live production e-commerce platform end-to-end in 2026 — PostgreSQL database, REST API integrations, Google OAuth authentication, admin dashboard, and Vercel deployment — using an agile, iterative approach. Bridges the gap between data insight and digital execution, translating findings into board-ready strategy and working technology. Actively advancing Python capability for predictive modelling and automated analytics pipelines.

TECHNICAL SKILLS

Data Analysis & BI: SQL (MySQL, PostgreSQL, T-SQL), Microsoft Power BI, Advanced Excel, trend forecasting, customer segmentation, KPI development, revenue optimisation, gap analysis

Data Warehousing & Cloud: Snowflake, Google BigQuery, Azure Databricks, Microsoft SQL Server (SSMS)

Data Engineering: End-to-end ETL processes, data ingestion, data cleaning and QA, dataset merging and joins, feature engineering

Databases: PostgreSQL (via Supabase), relational database design, Row Level Security (RLS)

Full-Stack Development: HTML, CSS, JavaScript, React, REST API integration, Supabase backend, Google OAuth, Vercel deployment, GitHub CI/CD

AI-Assisted Development: Lovable.ai, Emergent AI — used to design and ship production web applications

Project & Communication: Strategic roadmapping, Gantt Charts, stakeholder reporting, data storytelling, executive presentations, Miro, Figma, Canva

Programming: Python (Pandas, NumPy) — actively developing

PROJECT EXPERIENCE

Full-Stack E-Commerce Platform | [Roots and Earth \(Independent Build\)](#) | April 2026 – May 2026

Built and deployed a complete production e-commerce system covering database architecture, backend API integration, user authentication, a customer-facing storefront, and a live admin dashboard.

- Architected a PostgreSQL relational database on Supabase managing users, products, orders, and authentication — applied Row Level Security (RLS) to enforce data access controls at database level

- Built a customer-facing store and admin dashboard covering product management, order tracking, and sales overview using React-based components via Lovable.ai and Emergent AI
- Implemented full authentication including email/password and Google OAuth — session management, protected routes, and role-based access
- Integrated REST APIs for a payment gateway (Paystack) and courier services — connected third-party systems into the Supabase backend and checkout flow
- Deployed on Vercel with GitHub as the CI/CD pipeline — auto-deploys on every push, HTTPS active by default
- Delivered end-to-end solo in an agile, iterative workflow from scoping through to live production launch

Automotive Sector: \$7.6B Portfolio Analysis | Independent Research | January 2026

End-to-end data analysis project demonstrating large-scale SQL engineering, cloud data warehousing, and executive-level strategic reporting.

- Orchestrated a deep-dive analysis of a \$7.6B automotive portfolio using Snowflake to manage large-scale data ingestion, transformation, and storage
- Identified a 1,052% revenue surge opportunity by isolating Golden Asset windows through advanced trend forecasting and SQL pattern recognition
- Translated complex technical findings into board-ready Power BI visualisations focused on high-growth asset classes and risk mitigation strategies
- Managed project milestones using a Gantt Chart framework, ensuring on-time delivery across ingestion, cleaning, and visualisation phases

Bright Television: Viewership Analytics & Growth Strategy | Independent Research | September 2025

High-intensity end-to-end analytics engagement demonstrating rapid delivery, SQL data quality engineering, and actionable consumer behaviour insight.

- Executed a full end-to-end 72-hour workflow, improving data accuracy by 80% through rigorous SQL-based validation and outlier removal
- Discovered a 62% viewership surge, pinpointing Gauteng (37%) and Western Cape (18%) as the primary regional growth drivers
- Identified that short-form content drives 52% of total engagement, directly informing future content investment and scheduling decisions

EDUCATION & CERTIFICATIONS

Google Data Analytics Professional Certificate | Coursera / Google | 2024

- Completed: Foundations of Data; Ask Questions to Make Data-Driven Decisions; Analyse Data to Answer Questions; Prepare Data for Exploration; Process Data from Dirty to Clean
- Key Skills: Data Cleaning, Data Analysis, SQL, R Programming, Python fundamentals
- Outcome: Capstone project analysing large-scale open-source datasets

National Senior Certificate | Wallmansthal Secondary School, Gauteng | 2020

- Key Subjects: Mathematical Literacy (Analytical Logic), Geography (Demographic Data Analysis), Consumer Studies (Market Behaviour)

CORE COMPETENCIES & LANGUAGES

Competencies:

- Strong attention to detail and delivery accuracy
- Goal-driven and results-oriented execution
- Analytical thinking and data-driven problem solving
- Active listening, written communication, and public speaking
- Strategic planning, conflict resolution, and mentorship
- Flexible and comfortable working independently or across teams

Languages:

- English — Full Working Proficiency
- isiZulu — Native
